Postdoctoral Position in Synthetic Organic Chemistry

One postdoctoral position is available in the Olofsson group at the Department of Organic Chemistry, Stockholm University, Sweden. This 2-year position is financed by a postdoctoral scholarship of 25 000 SEK/month (free of tax) from Olle Engkvist Foundation. The department covers a health insurance from Kammarkollegiet.

The Olofsson group mainly works in the field of hypervalent iodine chemistry. Hypervalent iodine reagents are emerging as environmentally benign and selective reagents for a range of transformations. Our research is focused both on development of efficient synthetic routes to hypervalent iodine compounds and on innovative use of these reagents in organic synthesis. The efficiency of the developed methodology is demonstrated by applications in the total synthesis of interesting bioactive or natural products.

See the group website <http://www.organ.su.se/bo/> for more information about the group, projects, and links to publications.

Applicants should have a Ph.D. in Organic Chemistry, excellent written and oral English skills and a high degree of independence. Applicants should have previous experience in synthetic organic chemistry, preferably also in asymmetric synthesis and catalysis.

The application should contain application letter, CV, publication list, transcript of university records and a summary of research experience. The application should be accompanied by recommendation letters from two reference persons, *sent directly from the references to my email address below, with the applicant's name in the email heading.*

Application deadline: **November 15** by email to Prof. Berit Olofsson: berit.olofsson@su.se

The top candidates will be interviewed through Zoom in the beginning of December, after which the decision will be communicated. The starting date is in the spring, preferably April 1st or earlier.
