PhD program at Department of Organic Chemistry

Time plan of the PhD program

1. Not later than two months after the starting date according to the decision by the Department Board, the PhD student and her/his supervisor should submit the Individual Study Plan (ISP) for the PhD student to the Director of the PhD program (Director). The ISP should be signed by the PhD student, the supervisor and the co-supervisor. The PhD student and the Director then meet to make sure that the ISP is understood and agreed upon by the PhD student. The Director will then accept the ISP.

2. Every year, presently no later than November 15, the PhD student should hand in an updated ISP to the Director, who will read it and then have a discussion with the PhD student. At this meeting different aspects of the development of the program/studies for the PhD student should be discussed. If required, the Director will call a meeting with the PhD student together with the supervisor and the co-supervisor.

3. The PhD student shall within 18 months from the date of acceptance have completed all compulsory courses.

4. Other courses required to meet the requirement of 60 credits (hp) should be selected by the PhD student in collaboration with her/his supervisor, and approved by the director. The courses should be at the advanced level or specific PhD courses. A maximum of 15 hp (credits) can be credited or transferred for courses taken before being accepted as a PhD student. The courses cannot be part of the credits required for acceptance to the PhD program. Use Form PhD 2 Course accrediting to apply. The Director will decide how many credits will be accredited for a specific course and see to that it is registered in LADOK.

5. The half time control, which should take place 22-26 months after acceptance, is an event to support the PhD student in her/his studies. The PhD student and her/his supervisor should contact the Director, to suggest a date for the seminar that the PhD student should give, as well as suggested opponent. This contact should be taken at least four weeks before the date, suggested. The supervisor is in charge of contacting the opponent, and of coordinating the final date of the seminar, after agreement with the Director, Ämnesansvarig and the PhD student. Three weeks before the seminar the PhD student should give a written report, having the same format as a PhD thesis, to Ämnesansvarig, who will read and comment it within one week. The supervisor and the co-supervisor are expected to have been supporting the writing of the report, as this is one of the learning activities for the PhD student. The final version of the report should be sent to the opponent, the Director and Ämnesansvarig at least one week before the seminar. At this seminar the Director, Ämnesansvarig, the two supervisors and as many
of PhD students, PIs, and post-docs as possible should be present. After the seminar
the Director, Ämnesansvarig, the opponent and the supervisors meet to discuss the
strengths and the weaknesses of the seminar and the report. The Director will then
inform the PhD student, and the supervisor is expected to help the PhD student to
make the recommended improvements, whereafter the report is given to the Director
for final approval. The half-time control will be documented in Form PhD 3 Half-time
and registered in LADOK by the Director. In the case the PhD student wants, the half
time control can be in the format and with the formalities of an examination for a
Licenciate degree.

6. Six months before the planned date for the PhD dissertation the PhD student should
contact the Director, and submit a list of publications/manuscripts that he/she will base
the thesis on, using the Form PhD 4 Publications for thesis. At this point the PhD
student should have all credits required, or at least within two months. The supervisor
should at the same time inform the Director about suggested opponent, who should have been contacted, and an examination committee. The Director will inform
Ämnesansvarig about the planned date for dissertation. It is recommended that the
PhD student contacts SUB, The University Library, as soon as the date of dissertation
has been registered in the Disputationskalender.

7. If approved by the Director, the supervisor should confirm the date with the
opponent, but should also contact the proposed examination committee members. If
they all accept the supervisor should fill in the Disputationsblankett and mail it to the
Director, who after checking it, will forward it to the Head of Department, who in turn
will send it to the Faculty of Science.

8. No later than nine weeks before the dissertation, the PhD student should give a copy
of the thesis to the Director and Ämnesansvarig. The supervisor and the co-supervisor
are expected to have read and commented the thesis prior to this. The Ämnesansvarig
will within one week read and comment the thesis preferably in a meeting with the PhD
student. The Ämnesansvarig will also check the thesis for plagiarism. If there are
serious problems Ämnesansvarig should inform the Director.

9. No later than five weeks before the dissertation, the PhD student should hand in the
manuscript to the printers.

10. The PhD should spika (nail) the thesis no later than three weeks before the
dissertation date.
